Maple Syrup Production

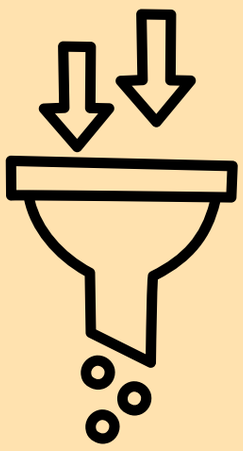
"right now we are focusing on the small-scale maple syrup process where people are making it in their backyards and kitchens. there are ways we could portray both the industrial and home scales if that is preferred"

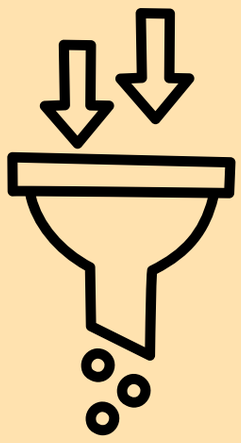
**when you hover over each contamination banner, it'll list "Possible sources of contamination" such as acid rain, smoke, air pollution, etc. Same for removal too*

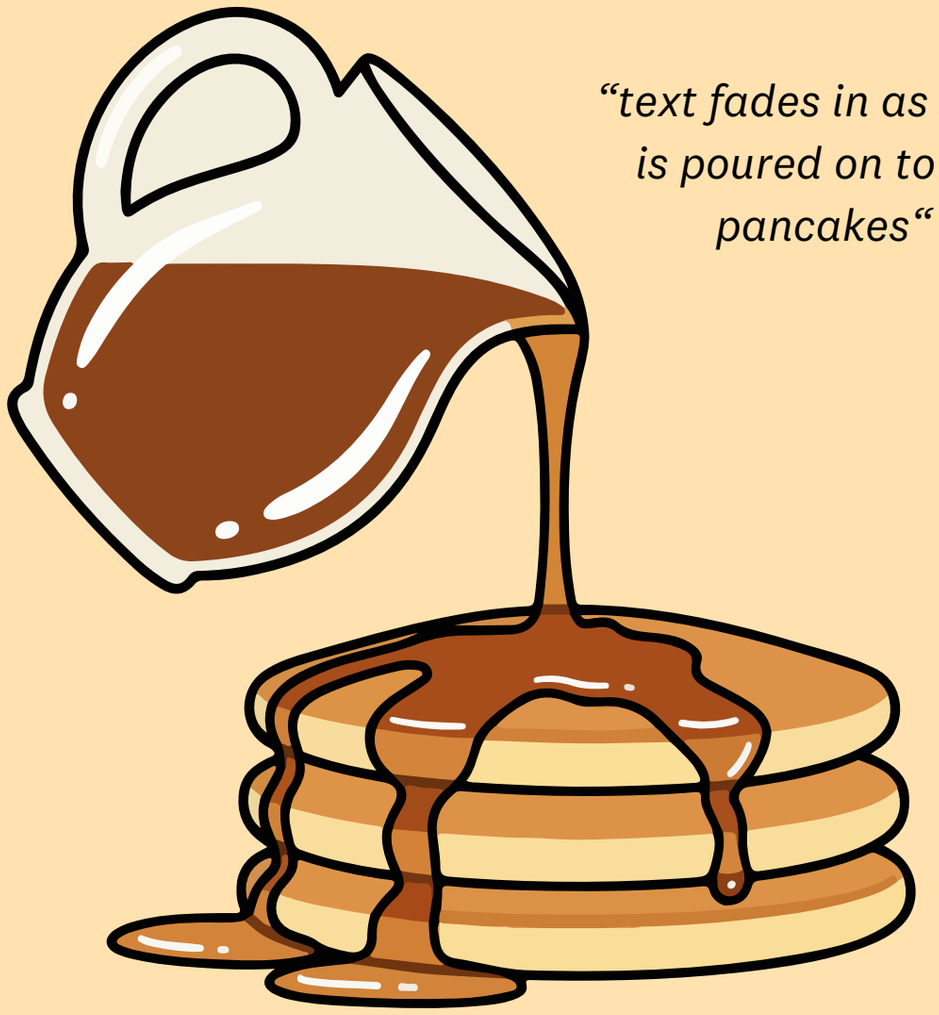
"as the viewer scrolls, the steps appear larger and then shrinks and moves up (see pg. 2) -> then labeled with contaminant/removal -> then labeled with to be measured or known sinks"

to be measured to be measured to be measured to be measured to be measured

environment → sap → filter → syrup → filter → store







"text fades in as syrup is poured on to the pancakes"

"short summary of the results found in this study → punchline that PFAS are everywhere, even on our breakfast plate"
